# IQTISODIY MATEMATIKA

The table is a comprehensive mathematical reference, organized into several columns. The first column contains various mathematical symbols and notations. The second column lists definitions and properties of mathematical concepts. The third and fourth columns contain numerous mathematical formulas, including algebraic identities, trigonometric formulas, and calculus rules. The fifth column features geometric diagrams, such as a triangle with internal angles and a circle with inscribed and circumscribed shapes. The sixth column contains additional formulas and constants. At the bottom of the table is a numerical table with multiple rows and columns of numbers, likely representing a multiplication or division table for specific values.
